

## Prototyping Tools

A big focus on most “hackathons” is for teams to work together to build a live app or website with almost complete functionality.

For this event, there are a lot of easy-to-use / drag-and-drop prototyping tools which your facilitators and the tech mentors will be able to help you with.

These tools will give you confidence that they can build something tangible and allow the teams to build solutions really fast (and not be afraid to start over).

Here are some of the tools you can use - feel free to sign up and play around with them before the event to get familiar with how they work.

In no particular order:

1. [Marvel](#)
  - a. A really easy design tool to prototype things together really quickly
2. [InVision](#)
  - a. Another really easy design tool to use
3. [Mobirise](#)
  - a. Easy to use website builder
4. [POP \(prototyping on paper\) using Marvel](#)
  - a. You can easily turn any design sketch into an interactive prototype
5. [Adobe XD](#)
  - a. Cool, easy-to-use prototyping tool by Adobe
6. [Montage](#)
  - a. Users can upload app screens they have designed, slice the screen into components, and then other users can use those components in their own designs!
  - b. A prototyping tool where users have uploaded different components of apps which you can use.
7. [Webflow](#)
  - a. Great to use for building websites - you can also use something like a [Wordpress theme](#)
8. [Weebly](#)
  - a. Website builder
